

CereBro Android — Play Store Checklist

Package `com.cerebrozen.app` · 5 August 2026 · Repo se verify kiya gaya (guess nahi)

1. Ek nazar me — abhi kahan khade hain

Cheez	Status	Detail
Release build banti hai	HO GAYA	Aaj verify kiya: BUILD SUCCESSFUL 8m 11s, R8 + lintVital pass, APK 16.6 MB
App name	HO GAYA	"CereBro" — strings.xml me set, manifest se wired
App icon	HO GAYA	Custom adaptive icon (background + foreground + monochrome)
Debug logs	HO GAYA	Sirf 2 Log.d, dono BuildConfig.DEBUG se guarded; release me R8 hata deta hai
Firebase / FCM	HO GAYA	google-services.json maujood hai
Account deletion (in-app)	HO GAYA	DELETE /users/me + AccountDeletionScreen
HTTPS-only release	HO GAYA	Cleartext sirf debug overlay me; release api.cerebrozen.in par pinned
Signing config (code)	HO GAYA	signingConfigs.release block add kiya; keystore na ho to build phir bhi green rehti hai
versionName	HO GAYA	0.1.0 → 1.0.0
Keystore (.jks) git-safe	HO GAYA	*.jks gitignore me add kiya (pehle sirf *.keystore tha)
Privacy policy public URL	HO GAYA	cerebrozen.in/privacy LIVE hai (200) — kuch karna nahi
512×512 Play icon	HO GAYA	playstore/play-icon-512.png — 32-bit RGBA, launcher ke wahi vectors se
Store listing copy	HO GAYA	playstore/LISTING_COPY.md — claims checker pass
Account deletion web page	DEPLOY BAAKI	/delete-account page likha ja chuka; ab web deploy chahiye
Keystore file	AAP KARENGE	keytool command neeche — passwords aapke, isliye aap hi banayein
Feature graphic + screenshots	MISSING	1024×500 graphic aur phone screenshots
Health Connect declaration	AAP KARENGE	READ_SLEEP permission hai → Play ka alag form + approval
Play Billing (Android)	MISSING	Android ka IAP code likha hi nahi gaya — pehla launch free app ke roop me

5 August 2026 ko kya-kya theek kiya gaya

build.gradle.kts me signing config + versionName 1.0.0 · *.jks gitignore me · /delete-account web page · 512px Play icon · store listing copy draft · ANDROID_RELEASE.md ke purane numbers correct kiye. Sab ke baad release build dobara chalayi:

BUILD SUCCESSFUL

, aur web par tsc + claims gate dono clean.

2. Kya kya lagega

Item	Kharcha	Note
Play Developer account	\$25 (~Rs 2,100)	Ek hi baar, lifetime
Upload keystore (.jks)	Free	Kho gaya to app kabhi update nahi kar paoge
App icon 512×512 PNG	Free	Ban chuka — playstore/play-icon-512.png
Feature graphic 1024×500	Free	Banwana padega
Phone screenshots (2–8)	Free	Home / Sleep / Talk / Journal
Short desc (80) + Full desc (4000)	Free	Draft ban chuka — playstore/LISTING_COPY.md
Privacy policy — live URL	Free	Already LIVE
Production backend live	Server cost	Release build api.cerebrozen.in par jaati hai

3. Code me jo bacha hai

a) Keystore banao — sirf yahi signing wala kaam bacha hai

Config code me aa chuka hai. Ab sirf key banani hai:

```
keytool -genkey -v -keystore cerebro-upload.jks -keyalg RSA \
-keysize 2048 -validity 10000 -alias cerebro
```

Phir `local.properties` me (git-ignored) ye 4 lines:

```
KEYSTORE_FILE=D:/path/cerebro-upload.jks
KEYSTORE_PASSWORD=...
KEY_ALIAS=cerebro
KEY_PASSWORD=...
```

Ye values aate hi `bundleRelease` apne aap signed AAB banane lagega. Values na hon to build fir bhi green rehti hai, bas artifact unsigned aata hai.

b) Play Billing — abhi ke liye skip

Android ka in-app purchase code likha hi nahi gaya (iOS/web ka ho chuka hai). Isliye pehla launch **free app** ke roop me karo, paid subscription baad me add karna.

c) Web deploy

`/delete-account` page ban chuka hai par live nahi hai. Play me URL daalne se pehle web deploy karna hoga.

4. Step by step

1 Play Console account banao — sabse pehle

play.google.com/console par \$25 pay karo. Identity verification me kuch din lag sakte hain, isliye ye kaam sabse pehle shuru karo, baaki cheezein saath-saath chalti rahengi.

2 Keystore banao

```
keytool -genkey -v -keystore cerebro-upload.jks -keyalg RSA \
-keysize 2048 -validity 10000 -alias cerebro
```

Password manager me save karo + ek offline backup rakho.

3 local.properties me keystore ki 4 values daalo (upar section 3a). **Signing config** aur **versionName 1.0.0** — ye dono ho chuke hain.

4 AAB banao — Play ko APK nahi, AAB chahiye

```
./gradlew :app:bundleRelease
```

Output: `app/build/outputs/bundle/release/app-release.aab`

5 Play Console me app create karo

Package `com.cerebrozen.app`, category **Health & Fitness**, Play App Signing enable karo.

6 Privacy policy URL listing me daalo — cerebrozen.in/privacy already live hai.

7 Web deploy karo taaki /delete-account live ho jaye

Page likha ja chuka hai; deploy ke baad URL Data safety section me daalna hai.

8 Store listing bharo

Icon 512px aur **descriptions ready hain** — sirf feature graphic aur screenshots banane hain.

9 Content rating questionnaire bharo — mental health app hai, honestly bharo.

10 Data safety form — jo collect hota hai:

- Account: email, name
- Health & wellness: moods, journal text, sleep logs
- Diagnostics: anonymous event counts (first-party)
- Mic: **on-device** speech-to-text — raw audio kabhi upload nahi hota, sirf text jaata hai
- In transit encrypted (HTTPS) · Backups OFF · Deletion in-app available
- Koi third-party ad ya analytics SDK nahi

11 Health Connect declaration form bharo — READ_SLEEP permission ki wajah se zaroori hai. Ye alag approval process hai, isme time lagta hai.

12 Internal testing track par AAB upload karo, khud test karo real device par.

13 Closed testing — agar account personal (individual) hai to Play **12 testers × 14 din** maangta hai. Organisation account par ye rule nahi lagta.

14 Production release — rollout percentage choose karo, submit karo, review ka wait.

5. Mental health app hone ki wajah se extra dhyan

- Listing me **medical disclaimer** saaf likho — "supportive AI, not medical care"
- **Treat / diagnose / cure** jaise shabd bilkul mat likho — ye Play rejection ka seedha kaaran hai. Repo me `docs/CLAIMS_MAP.md` aur `scripts/check-claims.mjs` isi ke liye bane hain; wahi language store listing me bhi use karo.
- Crisis resources app me dikhne chahiye (ye already ban chuka hai)
- Target audience clearly declare karo

Do cheezein Play Console par khud confirm kar lena

1.
12 testers × 14 din
ka rule sirf personal accounts par lagta hai — aapke account type par depend karega.
2.
Target API level
— app abhi `targetSdk 35` par hai. Play har saal August me minimum badhata hai. Upload karte waqt Console bata dega agar 36 chahiye.

Sabse bada risk: keystore

Upload keystore kho gaya ya password bhool gaye to us app ko **kabhi update nahi** kar paoge — naya package name le kar naye app ke roop me publish karna padega, saare users aur reviews chale jayenge. Din 1 se hi 2 jagah backup rakho.

6. Realistic timeline

Kaam	Time
Keystore + code changes (signing, version)	1 din
Play account verification	2–7 din
Store assets (graphics, screenshots, descriptions)	2–3 din
Privacy policy + deletion page host karna	1 din
Health Connect declaration approval	Kuch din
Closed testing (agar personal account hai)	14 din mandatory
Final review	Kuch ghante – kuch din
Total: lagbhag 3 hafte	

Is document ki har status line repo se verify ki gayi hai. Zyada detail ke liye: `docs/ANDROID_RELEASE.md` (6 July 2026) — us doc me Health Connect declaration wala point missing hai, jo yahan add kiya gaya hai. `docs/RELEASE_PLAN.md` sirf iOS ke liye hai.
